

Technical Information

Condumax CLS21D/CLS21

Conductivity sensors, analog or digital with Memosens technology

Cell constant $k = 1.0 \text{ cm}^{-1}$

Application

Measurement in media with average or high conductivity:

- Separation of media with average conductivity (milk/water)
- Separation of media with high conductivity (alkali/water)
- Drinking water treatment
- Wastewater treatment

Sensors with temperature probes are used in conjunction with conductivity measuring devices that support automatic temperature compensation:

- Liquiline CM442/CM444/CM448 (only CLS21D)
- Liquiline CM42
- Liquiline CM14 (only CLS21D)
- Liquisys CLM223/253 (only CLS21)
- Mycom CLM153 (only CLS21)

The resistivity in $\text{M}\Omega \cdot \text{cm}$ can also be measured using these transmitters.

Your benefits

- Different designs for optimum adaptation to the process or installation location
- Installation in pipe or flow assembly
- Compact design
- With plug-in head (IP68 (CLS21D), IP65 (CLS21)) or fixed cable (IP67)
- High chemical, thermal and mechanical resistance
- Quality certificate stating the individual cell constant

Other advantages of Memosens technology

- Maximum process safety owing to non-contact, inductive signal transmission
- Data security thanks to digital data transmission
- Very easy to use as sensor data saved in the sensor
- Predictive maintenance possible as sensor load data logged in the sensor

Function and system design

Measuring principle

Conductivity of liquids is determined with a measuring arrangement where two electrodes are located in the medium. An alternating voltage that causes a current to flow through the medium is applied at these electrodes. The electrical resistance, or its reciprocal value - conductance G - is calculated based on Ohm's law. The specific conductance κ is determined from the conductance value using the cell constant k , which depends on the sensor geometry.

1 Conductive measurement of conductivity

AC Alternating voltage source
 I Current intensity measurement
 U Voltage measurement

Measuring system

A complete measuring system comprises the following components at least:

- The conductivity measuring conductivity sensor CLS21D or CLS21
- A transmitter, e.g. Liquiline M CM42
- A measuring cable, e.g. Memosens data cable CYK10 or CYK71 for analog sensors

2 Example of a measuring system (with Memosens sensor)

1 Liquiline M CM42 transmitter
 2 Memosens data cable
 3 Condumax CLS21D

Communication and data processing (only CLS21D)

Communication with the transmitter

Always connect digital sensors with Memosens technology to a transmitter with Memosens technology. Data transmission to a transmitter for analog sensors is not possible.

Digital sensors are able to store the following system data in the sensor

- Manufacturing data
 - Serial number
 - Order code
 - Date of manufacture
- Calibration data
 - Calibration date
 - Cell constant
 - Delta cell constant
 - Number of calibrations
 - Serial number of the transmitter used for the last calibration
- Application data
 - Temperature application range
 - Conductivity application range
 - Date of first commissioning
 - Maximum temperature value
 - Hours of operation at high temperatures

Dependability (only CLS21D)

Reliability

Memosens technology digitizes the measured values in the sensor and transmits the data to the transmitter using a non-contact connection that is free from potential interference. The result:

- Automatic error message if sensor fails or connection between sensor and transmitter is interrupted
- Immediate error detection increases measuring point availability

Maintainability

Easy handling

Sensors with Memosens technology have integrated electronics that allow for saving calibration data and further information such as total hours of operation and operating hours under extreme measuring conditions. Once the sensor has been connected, the sensor data are transferred automatically to the transmitter and used to calculate the current measured value. As the calibration data are stored in the sensor, the sensor can be calibrated and adjusted independently of the measuring point. The result:

- Easy calibration in the measuring lab under optimum external conditions increases the quality of the calibration.
- Pre-calibrated sensors can be replaced quickly and easily, resulting in a dramatic increase in the availability of the measuring point .
- Maintenance intervals can be defined based on all stored sensor load and calibration data and predictive maintenance is possible.
- The sensor history can be documented on external data carriers and evaluation programs at any time. Thus, the current application of the sensors can be made to depend on their previous history.

Integrity

With inductive transmission of the measured value using a non-contact connection, Memosens guarantees maximum process safety and offers the following benefits:

- All problems caused by moisture are eliminated.
 - Plug-in connection free from corrosion
 - Measured value distortion from moisture is not possible.
 - The plug-in system can even be connected under water.
- The transmitter is galvanically decoupled from the medium.
- EMC safety is guaranteed by screening measures for the digital transmission of measured values.

Power supply

Electrical connection

CLS21D

The sensor is electrically connected to the transmitter via the CYK10 measuring cable.

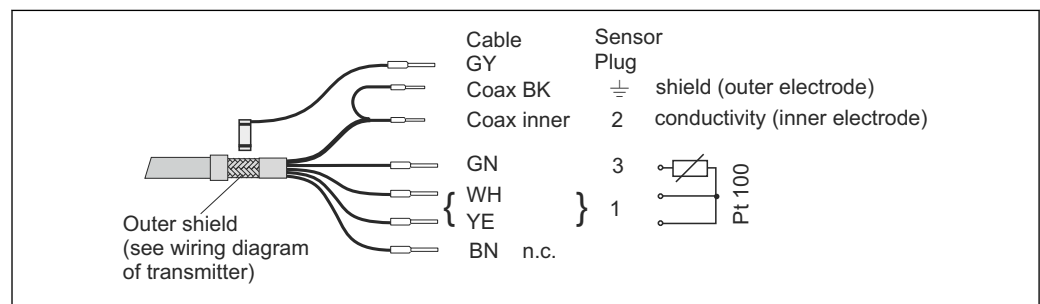

A0024019

3 Measuring cable CYK10

CLS21

The sensor is connected via the fixed cable or via the CYK71 measuring cable with a shield. The wiring diagram is provided in the Operating Instructions of the transmitter used.

A0024205-EN

4 Measuring cable CYK71

A compatible cable connector is included in the delivery for the plug-in head versions. You must terminate the CYK71 cable (not included in the delivery) with the cable connector at the sensor end according to the connection diagram above.

A VMB junction box and another CYK71 cable are required for the cable extension.

Performance characteristics, general

Uncertainty of measurement Each individual sensor is factory-measured in a solution of approx. 5 mS/cm (CLS21D) or approx. 500 µS/cm (CLS21) using a reference measuring system traceable to NIST or PTB. The exact cell constant is entered into the quality certificate supplied. The uncertainty of measurement in determining the cell constant is 1.0 %.

Performance characteristics (only CLS21D)

Response time	Conductivity	$t_{95} \leq 3 \text{ s}$
	Temperature	$t_{90} \leq 296 \text{ s}$
Maximum measured error	5% of reading	
Repeatability	0.2% of reading	

Installation

Installation instructions

The sensors are installed directly via the process connection. As an option, the sensor can also be installed via a flow assembly (see "Accessories").

A0024202

8 Installation in flow assembly CLA752

The Dipfit CLA111 immersion assembly is available to install sensors with a G1 thread in vessels (see list of accessories).

9 Installation in Dipfit CLA111 immersion assembly, fastening versions A, B and D

A0024145

Environment

Ambient temperature range	-20 to +60 °C (0 to 140 °F)	
Storage temperature	-25 to +80 °C (-10 to +180 °F)	
Humidity	5 to 95 %	
Degree of protection	CLS21D	IP 68 / NEMA type 6P (1 m water column, 25 °C, 24 h)
	CLS21	
	Fixed cable version	IP 67 / NEMA 6
	Plug-in head version	IP 65 / NEMA 4X

Process

Process temperature

Threaded version with fixed cable -20 to 100 °C (-4 to 212 °F)
 Version with plug-in head, Clamp version -20 to +135 °C (-4 to 275 °F) at 2.5 bar (36 psi)

i The maximum temperature for communication with the transmitter is 130 °C (266°F) for the Memosens versions.

Process pressure (absolute)

CLS21D/CLS21 17 bar (246 psi) at 20 °C (68 °F)

Temperature-pressure ratings

A0024886

10 Mechanical pressure-temperature resistance

Mechanical construction

Design CLS21D

A0024381

11 CLS21D

- 1 Memosens plug-in head
- 2 Process connection (here G1)
- 3 Coaxial measuring electrodes made of graphite
- 4 Wrench flats for mounting

Design CLS21

12 Design with plug-in head

- 1 Four-pin connector
- 2 Cable gland Pg 9
- 3 Process connection (here Clamp 2")
- 4 Sensor shaft with measuring electrodes

13 Design with fixed cable

- 1 fixed cable
- 2 Process connection (here NPT 1" thread)
- 3 Sensor shaft with measuring electrodes

Dimensions CLS21D

14 Version with thread G1

15 Version with Clamp 2"

A0024393

16 Version with sanitary connection
Measurements in mm (inch)

A0024394

17 Version with thread NPT 1"

Dimensions CLS21

A0024397

18 Fixed cable version with NPT 1" thread

A0024398

19 Fixed cable version with Clamp 2"

20 Plug-in head version with G1 thread

21 Plug-in head version with Clamp 2"

22 Plug-in head version with sanitary connection
Measurements in mm (inch)

Weight

Approx. 0.3 kg (0.66 lbs) depending on version

Materials (in contact with medium)

Electrodes	Graphite
Sensor shaft	Polyethersulfone (PES-GF20)
Thermal conductivity socket for temperature probe	Titanium 3.7035

Process connections

Thread G1
NPT 1" thread
Clamp 2" as per ISO 2852
Sanitary connection DN 25 as per DIN 11851

Certificates and approvals

CE mark	<p>Declaration of Conformity</p> <p>The product meets the requirements of the harmonized European standards. As such, it complies with the legal specifications of the EC directives. The manufacturer confirms successful testing of the product by affixing to it the CE mark.</p>

Export the order code as a PDF or Excel file. To do so, click the appropriate button at the top of the screen.
Scope of delivery	<p>The scope of delivery includes:</p> <ul style="list-style-type: none"> ■ Sensor in the version ordered ■ Cable connector, for connecting to CYK71 measuring cable (only for plug-in head versions CLS21) ■ Operating Instructions

Accessories

 The following are the most important accessories available at the time this documentation was issued. For accessories not listed here, please contact your service or sales office.

Assemblies

Dipfit CLA111

- Immersion assembly for open and closed vessels with flange DN 100
- Product Configurator on the product page: www.products.endress.com/cla111

 Technical Information TI00135C

Flow assembly CLA751

- For installing conductivity sensors with G1 thread (CLS12, CLS13, CLS21, CLS30)
- Inlet (below) and outlet (lateral) DN 20 with G1 thread adapter nut
- Stainless steel 1.4571 (AISI 316Ti)
- Max. temperature 160 °C (320 °F), max. pressure 12 bar (174 psi)
- Order No. 50004201

 23 Dimensions in mm (inch)

Flow assembly CLA752

- For installing conductivity sensors with G1 thread (CLS12, CLS13, CLS21, CLS30)
- Inlet (lateral) and outlet (lateral) DN 20 with G $\frac{1}{2}$ internal thread
- Polypropylene (PP)
- Max. temperature 90 °C (194 °F), max. pressure 6 bar (87 psi)
- Order No. 50033772

 24 Dimensions in mm (inch)

Measuring cable

CYK10 Memosens data cable

- For digital sensors with Memosens technology
- Product Configurator on the product page: www.endress.com/cyk10

Technical Information TI00118C

Memosens data cable CYK11

- Extension cable for digital sensors with Memosens protocol
- Product Configurator on the product page: www.endress.com/cyk11

Technical Information TI00118C

Measuring cable CYK71

- Underterminated cable for connecting analog sensors and for extending sensor cables
- Sold by the meter, order numbers:
 - Non-Ex version, black: 50085333
 - Ex-version, blue: 50085673

Junction boxes (only CLS21)

VBM

- Junction box for cable extension
- 10 terminal strips
- Cable entries: 2 x Pg 13.5 or 2 x NPT 1/2"
- Material: aluminum
- Degree of protection: IP 65
- Order numbers
 - Cable entries Pg 13.5 : 50003987
 - Cable entries NPT 1/2": 51500177

VBM-Ex

- Junction box for cable extension in hazardous area
- 10 terminal strips (blue)
- Cable entries: 2 x Pg 13.5
- Material: aluminum
- Degree of protection: IP 65 (≅ NEMA 4X)
- Order number: 50003991

Calibration solutions

Conductivity calibration solutions CLY11

Precision solutions referenced to SRM (Standard Reference Material) by NIST for qualified calibration of conductivity measuring systems in accordance with ISO 9000

- CLY11-A, 74 µS/cm (reference temperature 25 °C (77 °F)), 500 ml (16.9 fl.oz)
Order No. 50081902
- CLY11-B, 149.6 µS/cm (reference temperature 25 °C (77 °F)), 500 ml (16.9 fl.oz)
Order No. 50081903
- CLY11-C, 1.406 mS/cm (reference temperature 25 °C (77 °F)), 500 ml (16.9 fl.oz)
Order No. 50081904
- CLY11-D, 12.64 mS/cm (reference temperature 25 °C (77 °F)), 500 ml (16.9 fl.oz)
Order No. 50081905
